Comments from James Li

Homepage: - The “<” and “>” symbols look very intuitive and make people think of arrows that perhaps lead to other pages on this site. It is also consistent with the menu bar on top as in they point to the same directions.

Film page: - On hover, the thumbnail will enlarge. This feature makes it look like it's popping up to the front, preventing users from feeling lost about where their mouse cursor went - Only pictures are available, perhaps some title or caption can be shown on hover or just laid out plainly so as to provide more information on what the film is about without clicking on it.

Project page: - Grid layout looks neat and straightforward. It gives people a clear view of what's available. - The captions shown on hover is intuitive and easy to read with a grey shade underneath, but it would make more sense if all captions are centered both horizontally and vertically, and if the grey shades can be of darker colors so that it blends into the background more.

Individual project page: - Alignment of contents is not consistent throughout the page. Some are aligned to the left and some are aligned to the right. Easy to confuse users on where they should look. - Spacing between text and image is not consistent. Need to shorten the distance between texts and images that are relevant or belong to the same hierarchy and distant those that are less relevant. - With the current cropping and resizing of images, the aspect ratio is very off, making it very hard and unpleasant to read. - Contrasts between font sizes should be obvious and consistent to exemplify the hierarchical structure of the page, i.e. heading, sub-heading, lists/paragraphs

Comments from Ambika Miglani

- Bold white text on black background a little bit harsh
- Could benefit from changing up colors of font to distinguish categories from each other
- Maybe standardise the image size and layout for all projects. Currently the information is messy and distracting when trying to read the portfolio.
- Film page user interaction quite clear and grid layout is intuitive and effective
- Transitions are immersive and smooth. Allows more interaction for the user and is engaging
